Steam Market Intelligence Report

Client: A new indie game studio planning to release its first game on Steam.
Project goal: Use historical Steam data to recommend a good launching strategy for a company looking to launch their game on steam.

Executive Summary

This report looks at Steam marketplace data which is scraped from official steam website.

Key findings:

- Games priced under \$15 tend to reach the most players on Steam.
- Games that consistently earn user reviews tend to have higher estimated ownership numbers.
- Windows ecosystem represents over 70% of all Steam games.
- Competition on Steam has exploded from about 25 times what it was in 2013, this makes it harder for new games to get attention.
- Most Games fall under 20,000 estimated owners category, this marks how important it is to set realistic launch targets.

Strategic recommendation: The studio should aim a low-risk and accessibility-focused launch strategy which implies affordable pricing, Windows-first development, review generation incentive, and loyal community making. Expectations should be benchmarked against realistic targets.

Dataset Source and Business Context

- Dataset: Steam games market dataset from Kaggle.
- Source URL: <https://www.kaggle.com/datasets/fookongames/steam-games-dataset>
- Client: A new indie studio seeking guidance on pricing, platform support, reviews, and launch strategy.
- All code and dataset can be found in <https://github.com/Negi-Ashish/MS04-AI-and-Applications>

Methodology

Data Acquisition → Preprocessing → EDA → Business Analysis → Recommendations.

Tools: Python 3, Pandas, NumPy, and Plotly Express.

All analysis was conducted in a reproducible Jupyter Notebook environment.
